That's the Tiqit

The Tiqit *(ticket)* handheld personal computer provides full notebook PC functionality in a PDA-class device. The Tiqit is designed for mobile professionals who require ubiquitous, fully functional, enterprise level applications and rich information wherever they work—on the trading floor, on the road, down the hall, in the warehouse, or in the field. Tiqit runs any enterprise standard operating system—Windows (XP, 2000, NT, 98), Linux, or UNIX. Applications formerly available only on desktop and notebook PC's can now also be deployed on the Tiqit handheld PC. With a 4" color screen, 56-key QWERTY keyboard, x86 compatibility, and standards-based extensibility to support any wireless communication option (WiFi, CDMA, Bluetooth, Infrared, etc.), the Tiqit becomes an indispensable, truly mobile, business productivity tool.

Workforce On the Go

With the Tiqit, mobile workers can now use the same Enterprise Resource Planning, Customer Relationship Management, Sale Force Automation, custom applications and Email tools that run on their desktop and notebook computers. This flexibility benefits a wide range of mobile workers including financial traders, insurance adjusters, warehouse personnel, health care workers, military personnel, and sales representatives.

Mobile workers typically carry multiple devices such as PDAs, BlackBerrys, and notebook computers to meet all their needs. The Tiqit satisfies these needs with a single handheld device. Tiqit users connect to corporate and public wireless networks, retrieve business-critical data and Internet content, run full-scale enterprise applications, use and manipulate locally-stored rich information (including documents, maps, spreadsheets, pictures, schematics, etc), update proposals on the fly, print documents, give PowerPoint presentations, and read Outlook Email—all from the convenience of one personal computer in the palm of your hand.

Making Business Cents

Supporting mobile workers is becoming increasingly expensive at a time when CIO's are searching for ways to reduce costs. IT costs continue to soar because staff must support a steady stream of new devices.   Porting applications to run on PDAs is difficult and maintenance is expensive. End-users are typically dissatisfied with ported software that reduces both application functionality and user productivity. Help desk support costs rise significantly, too, as headcount is increased to troubleshoot unfamiliar devices and ported applications.

Tiqit reduces TCO by eliminating the need for multiple devices, a variety of operating systems, and modified applications. Compact yet powerful, Tiqit preserves your investment in application software while giving your mobile workers the competitive advantage of full PC applications and access to all of the information they need!

Specifications

Near Photo Quality Images
View presentations, MPEG videos, and schematics through a high resolution color backlit 4 inch display.

Infrared (IR) Beaming
Send files, appointments, and more wirelessly to to other colleagues.

Touch Screen Interface
Stylus data entry is a snap with a touch sensitive screen utilizing handwriting recognition from Microsoft.

Boundless Storage
A Secure Digital flash memory expansion slot offers quick access to large amounts of data.

Fast Application Access
Two programmable hot keys let you launch your favorite application with one button click.

Unlimited Peripheral Support
Attach a CD/DVD player, Bluetooth radio, printer, barcode scanner, digital camera, ZIP drive, or GPS to the USB port for speedy I/O transfer.

Total Wireless Mobility
Mobile workers can stay connected to the office through Wi-Fi (802.11b) or CDMA/GPRS using the PCMCIA slot and a wireless card.
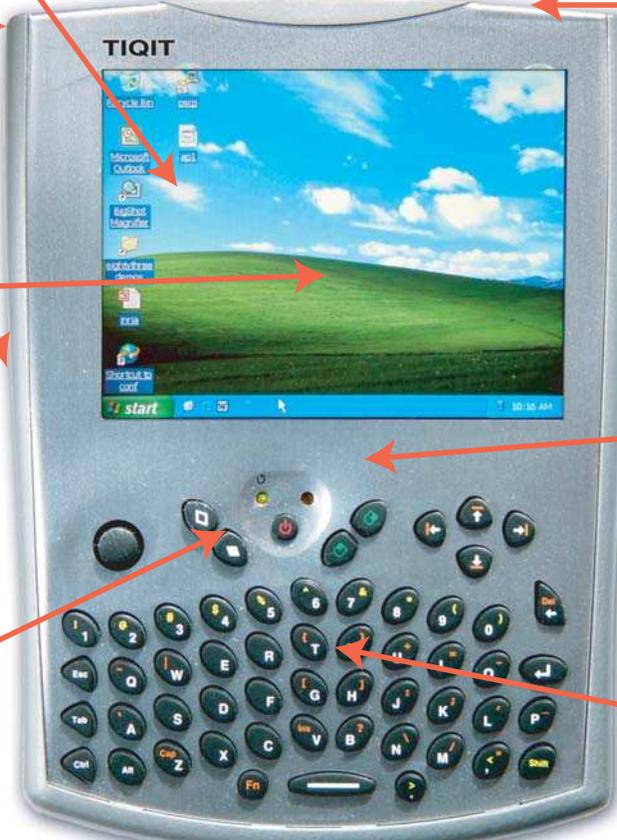

Shrink Your Desktop
A docking connector allows you to attach a full size keyboard, monitor, mouse, and other devices using Tiqit's ultra small docking station (available separately), freeing up valuable desktop space.

Full PC Power
Run enterprise class ERP, CRM, SFA, and messaging software on a 300MHz CPU, 256MB SDRAM, 15GB hard drive handheld PC.

Ergonomic Design
Built-in 56-key QWERTY keyboard and joystick allows both one-handed & two-handed mobile use.

Processor and Memory

- 300 MHz Pentium-class CPU
- 256 MB of SDRAM

Storage

- 20 GB ATA hard disk drive

Display

- 4.0" 640 x 480 TFT (16-bit color) VGA LCD with backlight

Audio

- Stereo headphone/mic jack
- Internal speaker

Expansion and Connectivity

- USB 1.1 port
- PCMCIA/ PCCard Type II slot
- Secure Digital flash memory
- Infrared port

User Interface

- 56-Key QWERTY keyboard
- Touch screen
- Micro joystick & left/right mouse buttons

Operating System

- Microsoft Windows XP

Dimensions, Weight, and Power

- 5.9" x 4.0" x 1.2"
- 20 ounces (including battery)
- Power adapter port
- Internal lithium-ion rechargeable battery; 4 hours under normal usage

Docking Station

- Hi-res VGA port for external monitors or projectors -1280 x 1024
- Serial / RS232 port
- Additional USB port
- Audio line in/out jack
- Battery charging port
